

Rimidi ([www.rimidi.com](http://www.rimidi.com)) is an exciting, rapidly growing healthcare technology start-up located in Midtown Atlanta. Rimidi offers a cloud-based software platform that helps doctors provide better connected care to patients with chronic conditions such as diabetes, fatty liver disease and heart failure. The software integrates with existing electronic health records (EHRs) to offer specific approaches to treatment for certain individuals, based on patient-generated data, best practice guidelines and clinical information. Rimidi is looking for team members to join our mission of making healthcare better.

<b>Rimidi Job Description</b>
<b>Title:</b> Business Analyst
<b>Department:</b> Product
<b>Reports to:</b> Director of Product

### Summary

Rimidi is a leading provider of cardiometabolic decision support tools, remote patient monitoring tools, and clinical data visualization. The Rimidi platform is designed to coexist within the broader electronic medical record ecosystem, and features deep integrations with electronic medical records, home health devices, and other patient-generated data stores.

This position will be responsible for supporting Rimidi's population health module and writing new reports to meet the reporting needs of Rimidi users.

### Primary Responsibilities

- Writing SQL reports against a complex set of healthcare data.
- Engage with client success teams to determine report requirements and to validate completed reports against the requirements.
- Complete development projects to make reports more accessible and usable to end users.
- Write business facing reports to enable sales and marketing teams.
- Unlock insights in the healthcare data set.
- Strong voice to the roadmap of the population health reporting module.
- Strong contribution towards overall development lifecycle during the design and iteration phases of development.
- Ability to iterate quickly against low level designs and communicate intent clearly with technical and non-technical members of the product team.

## Qualifications

We are looking for candidates with strong technical skills and a desire to improve upon their skills while serving the digital health market. The ideal candidate has a strong drive for solving healthcare challenges and is passionate about building the perfect user experience for clinicians and patients who use Rimidi in their day-to-day chronic disease management routines. Candidates should be excellent technical communicators, comfortable working in a team-oriented environment among colleagues with a variety of backgrounds.

Candidates must have:

- Deep understanding of SQL.
- 3+ years of professional experience working with databases, preferably relational databases.
- 3+ years working in the healthcare technology field.
- Experience with Python, Django, and SQL is preferred.
- Bachelors or master's degree in computer science, mathematics, engineering, or related field.
